

HTML + JavaScript Real-Time Practice Workshop

This workshop is prepared for JavaScript practice using HTML elements. It covers variables, functions, getElementById(), DOM manipulation, adding elements, deleting elements, controlling elements, if-else conditions, events, and real-time projects used in day-to-day life.

Workshop Topics

Topic	Purpose
Variables	Store data
Functions	Perform tasks
getElementById()	Access HTML elements
innerHTML	Change webpage content
style	Control design
createElement()	Create new HTML element
appendChild()	Add new element
remove()	Delete element
if else	Decision making
Events	Handle user actions

1. Login Form

```
<input type="text" id="username">
<button onclick="login()">Login</button>

<script>
function login() {
    let user = document.getElementById("username").value;

    document.getElementById("output").innerHTML =
        "Welcome " + user;
}
</script>
```

2. ATM Balance Check

```
<button onclick="checkBalance()">Check Balance</button>

<script>
function checkBalance() {
    let balance = 25000;

    document.getElementById("result").innerHTML =
        "Balance: ■" + balance;
}
</script>
```

3. Online Shopping Cart

```
function totalBill() {
```

```
    let price = 1500;
    let quantity = 2;

    let total = price * quantity;

    document.getElementById("bill").innerHTML = total;
}
```

4. Food Order App

```
function orderFood() {
    document.getElementById("food").innerHTML =
    "Pizza Ordered";
}
```

5. Instagram Likes Counter

```
let likes = 0;

function addLike() {
    likes++;

    document.getElementById("count").innerHTML =
    likes;
}
```

6. Student Marks Calculator

```
function marks() {
    let english = 80;
    let maths = 90;

    let total = english + maths;

    document.getElementById("result").innerHTML =
    total;
}
```

7. Calculator App

```
function add() {
    let a = Number(document.getElementById("num1").value);
    let b = Number(document.getElementById("num2").value);

    let total = a + b;

    document.getElementById("answer").innerHTML =
    total;
}
```

8. Change Background Color

```
function color() {
    document.body.style.backgroundColor =
    "lightblue";
}
```

9. Dark Mode

```
function darkMode() {
    document.body.style.backgroundColor = "black";
    document.body.style.color = "white";
}
```

10. Password Length Checker

```
function checkPassword() {  
    let pass =  
        document.getElementById("password").value;  
  
    document.getElementById("length").innerHTML =  
        pass.length;  
}
```

11. Live Typing Preview

```
function showText() {  
    let text =  
        document.getElementById("textbox").value;  
  
    document.getElementById("output").innerHTML =  
        text;  
}
```

12. Counter Application

```
let counter = 0;  
  
function increase() {  
    counter++;  
  
    document.getElementById("count").innerHTML =  
        counter;  
}
```

13. Add Task in To-Do App

```
function addTask() {  
    let task =  
        document.getElementById("task").value;  
  
    let li = document.createElement("li");  
  
    li.innerHTML = task;  
  
    document.getElementById("list").appendChild(li);  
}
```

14. Delete HTML Element

```
function removeItem() {  
    document.getElementById("box").remove();  
}
```

15. Show Current Time

```
function showTime() {  
    let currentTime = new Date();  
  
    document.getElementById("time").innerHTML =  
        currentTime;  
}
```

16. Age Eligibility Checker

```
function checkAge() {
    let age =
        document.getElementById("age").value;

    if(age >= 18) {
        document.getElementById("result").innerHTML =
            "Eligible";
    }
    else {
        document.getElementById("result").innerHTML =
            "Not Eligible";
    }
}
```

17. Mobile Recharge App

```
function recharge() {
    document.getElementById("message").innerHTML =
        "Recharge Successful";
}
```

18. Employee Salary Calculator

```
function salary() {
    let basic = 30000;
    let bonus = 5000;

    let total = basic + bonus;

    document.getElementById("salary").innerHTML =
        total;
}
```

19. Electricity Bill

```
function bill() {
    let units = 100;
    let price = 8;

    let total = units * price;

    document.getElementById("bill").innerHTML =
        total;
}
```

20. Temperature Converter

```
function convert() {
    let c =
        document.getElementById("celsius").value;

    let f = (c * 9/5) + 32;

    document.getElementById("fahrenheit").innerHTML =
        f;
}
```

Flow of JavaScript

FLOW OF JAVASCRIPT:

1. User clicks button

2. Event calls function
3. Function accesses HTML element
4. Value is stored in variable
5. Logic is processed
6. Result displayed on webpage

This is how real-time web applications work.

Practice Plan

MORNING PRACTICE PLAN

- 4:30 AM - Read notes
- 5:00 AM - Type programs manually
- 6:00 AM - Modify examples
- 7:00 AM - Create own mini project

Important:

Do not copy paste.

Type every line manually.
